

# SPIES Honeycomb-structure

Following the example of nature

## WHY?

Saving resources for protecting resources! Our innovative honeycomb-structure technology combines all the requirements for functional and sustainable packaging. It protects our almost most valuable resources – our food – or serves as a container for various other applications and impresses with its resource-saving structure, which has proven itself in nature.

## INNOVATIVE!

Due to the structure of the honeycomb known in nature and its advantages, the use of this technology allows a saving in the proportion of plastic of about 30% and without any sacrifice in the field of physical properties. If desired, a further proportion of plastic can be saved and replaced by renewable raw materials.

## CONVINCES WITH EASE

In addition to the our well known and proven quality of our injection molded packaging, you benefit from other advantages:

plastic savings up to 30% and more

same stability as full-surface injection molded articles

1-material packaging

individual shapes and sizes possible

100 % recyclable

additional plastic savings possible through use of renewable raw materials

## BRANCH

Universally applicable, food, delicatessen, dairy, specialty chemicals, technology

## DESIGN

Especially suitable for large areas. Your desired article geometry can be developed individually.

## STRATEGY / CAUSE

- ✓ Weight saving
- ✓ Raw material saving
- ✓ Stability maintenance

## AWARDED

The SPIES honeycomb-structure was awarded with the German Packaging Award 2022 in the category "Sustainability".
